

Indian Association for Women's Studies

*Fourth General Body Meeting
30 December 1988*

**Reports from the President, General Secretary and the Treasurer
April 1987—December 1988**

INDIAN ASSOCIATION FOR WOMEN'S STUDIES

Statement of the President, 30 December 1988

As we begin our general body meeting today a few words from me would be in order. I only want to state how I have felt as the President of the Indian Association for Women's Studies. When my name was proposed for election as per the election rules in IAWS I was, frankly, surprised. My victory in the election redoubled my surprise. But that also was nothing compared to the astonishment I experienced when the outgoing President Dr. Madhuribahen Shah proposed my name as the next President. Before I could realise what was happening, somebody had seconded the proposal and all present in the EC meeting had welcomed it. I had gone to that meeting of 31 March 1987 only to put in an appearance and develop a better understanding of the IAWS. I have formed a habit of gaining experience wherever possible. IAWS election. I thought, gave me an opportunity to wander in 'fields fresh and pastures new' 'as Matthew Arnold expressed in his poem 'Scholar Gipsy'.

I confess I took a long time to understand the functioning of the Association and the personalities connected with it. Even today I do not think I have grasped everything fully. But my almost two-year-long association with the persons concerned and the target we tried to achieve have developed within me a fairly clear sense of what IAWS can take on.

What is achieved during the term of this EC will be reported by our very able General Secretary Dr. Susheelabahen Kaushik and Dr. Vina Mazumdar, the dynamic person who took up the onerous duties of the treasurer. Between Susheelabahen and Vinadi the Association has been efficiently and carefully looked after. I am only trying to put in few words about what I have seen, experienced and thought about IAWS.

It has been my feeling that as a national level Association, IAWS is not sufficiently wellknown throughout the country. We, in Gujarat, tried to inform teachers in universities and colleges. Many responded by saying that they did not know of such an organisation and would become members. What is true of Gujarat could be true of many other states. We perhaps need an awareness raising campaign about IAWS existence also.

The Newsletter that IAWS is publishing could be a very useful and powerful medium for us. The information we need is about what is happening in this country in the area of Women's Studies and Activism thereby keeping a track of the Women's Movement here. As one wants to know about the fresh researches undertaken, so one wants to know the findings of workshops, seminars, conferences etc. convened on women's issues. We have not been able to build the network but that could be done now.

I have always wondered if researchers could be of help to activists. Just as a researcher starts working, available literature on the chosen theme is scanned and also reported. An activist needs to do that too, in a given situation it would be helpful if

the activist could find out the details of any action programme undertaken by any activist group in a similar situation. Such documentation would help. But one does not know where to turn to for such help. The activist also needs to survey the socio-economic status or may be the health status of the target group. The action programmes undertaken by activists to be evaluated periodically not only to find out the impact of the programme on the target group but also for the need to change the inputs or the approach or may be the need to end the programme. However, these need to be quickly done. One cannot take 12 to 18 months, for its relevance to the activist would be lost. Could we have some specific method devised for the use of activists ?

Regional seminars on Women's Studies are necessary to spread awareness and provide a wider base to the Association. Regional/Zonal Secretaries could look after the arrangements which the General Secretary could direct. These would help the IAWS cross the barrier of language as in such seminars regional language could be used with on-the-spot translations wherever necessary. The most important would be that in such seminars activists also could participate and that would help bridge the barriers between the scholars and the activists. The Women's Movement can gain momentum only if the efforts of the researchers and activists are co-ordinated.

More interaction, more dialogue, and better understanding would help generate mutual respect and friendliness which would replace the feeling of discomfort that the activist experiences in the company of her learned sisters. Let us look forward to the future in which the paths of studies and activism meet.

ILA PATHAK
President

INDIAN ASSOCIATION FOR WOMEN'S STUDIES

Report of the General Secretary, April 1987 to Dec. 1988

It is a little more than two years since the General Body of the Association met at Chandigarh during the Third National Conference in October 1986. During this period the Association has grown immensely in its membership, coverage activities, significance and impact. This growth is partly the result of the strengthening of the women's movement, the increasing awareness on women's position, rights and issues and the expanding horizons of educational institutions and developmental agencies. It is also partly attributable to the values and goals that the Association has adopted and the activities it has undertaken.

The Association thus has come to have a central place in the Indian academic and developmental circles. It has the unique character of having among its members academics, and universities, social activists and voluntary organisations, professionals and government employees. Its members come from all parts of India and many countries of the world. Our present membership stands at 187 Life members, 265 Ordinary members, 14 Institutes and 10 Corporate members, among whom there are many universities and colleges. It is indeed gratifying to find more and more Universities and NGOs becoming members. This as well as the enthusiastic students' response are indicative of the increasing importance to education, as the primary means of sensitisation and awareness raising on women's issues and of women's studies as an action that focusses and highlights these concerns and seeks to direct and bring about the much needed empowerment.

Viewed in this context one is gratified that more and more voluntary organisations, national agencies and government departments are taking up women's issues. Not merely are these activities expanding into new areas of action, but are also seeking to reach out to women in the rural and remote areas. The approach to women's issues is also gradually changing from one of protection and welfare, to that of participation and empowerment. One is also finding little more space to women's issues in the public policies. More and more universities and colleges have started Women's Studies Centres and Cells. Today there are 17 such Centres and 10 Cells which are being supported by the University Grants Commission. Under the Continuing and Non-Formal Education Schemes, much of legal literacy and awareness creation is taking place. Teachers' training programmes are waking up to provide Women's Studies perspectives in their content and methodology.

At the same time, however, we are also witnessing a spurt in crimes and atrocities against women. Dowry torture deaths, widow burning, rape, sexual assaults etc. are increasing. With the 'Sati' of Roop Kanwar it reached a climax. Communalism and fundamentalism operating in the name of religion, consumerism and market forces exploiting women's inferior position, are heightening the violence against women and suffocating them further. The challenges before Women's Studies and social action groups are increasing. Obviously the task of sensitisation to women's right to equality, of

creating awareness among men and women on gender justice, of bringing about a re-socialisation process in the society, is much more arduous and calls for a vigorous and sustained struggle. The Association's role in the coming days is clearly marked out. Education, embodying the values of gender equality and informed of the Women's Studies components, continues to be the most primary instrument for bringing about social consciousness leading to social change.

Activities

Recognising the importance of education for empowering women and bringing about her equality, the Association, very early during this period, embarked on a scrutiny of the educational policy and educational system. The Third Executive Committee which was formed following the Elections held soon after the last General Body, resolved in its very first meeting to examine the National Policy of Education from the perspective of women. Towards this purpose it appointed two Task Forces; the first would analyse the details of the Policy and Programme of Action, their implications for women's equality and development. The second task force was to specifically look into the science, technology and vocational education for girls. The two Task Forces got into immediate action and had a preparatory meeting in Delhi on 21 April, 1987.

The meeting took up to review the National Policy on Education and the Plan of Action. It took note of the fact that the NPE had devoted under 4.2 and 4.3, two specific paragraphs for women, under the sub-title "Education for Women's Equality" under the section on "Removal of Disparities". In addition, the Policy had also made reference to the needs of women and children at other places (for instance para 5.2 in "Early Child Care and Education"). This has been a welcome departure from the previous documents, wherein girls' education has been merely incidental.

The discussion also noted that the policy itself has been couched in terms of both the values as well as measures. The measures particularly were aimed at (i) imparting the values of equality (ii) access of education facilities to women and girls (iii) greater participation of women in updated technologies, and (iv) utilising the potentialities of women for bringing about social change. The working groups hence mainly aimed at (a) a survey of the present position (b) the extent and nature of implementation of these policies in the past years or more (c) specific recommendations by way of effective strategies for implementation.

Following this a series of studies were commissioned. These studies dealt with themes like.

1. The Gender Values and the Concept of Empowerment of Women.
2. General Education
 - (a) School Education
 - (b) Higher Education

3. Science and Technology Education

(a) Science Education in Schools

(b) Vocational Education

(c) Medical Education

4. Non-Formal/Adult Education

5. Support Structure/Services

6. Role of Media

7. Democratic Organisation and Accountability

These papers were taken up for a detailed discussion in a two-day workshop at Delhi, on 8 and 9 July 1987.

It was widely agreed that the values of women's equality, rights, empowerment and participation in developmental processes and benefits, should form the Cornerstone of Indian Educational system, its syllabi and structure, teaching methodology and content, at all stages and types of education, school and college, formal and non-formal, general as well as technical. It was stressed that Women's Studies, which sought to highlight the contribution and role of women, their present social position, and the constraints on their access to rights and developmental benefits etc. should form an essential part of all education. Following is a brief summary of the major findings of the papers.

In the discussions on Non-Formal Education, it was found that most of the Adult Education Centres are merely emphasising literacy; the social awareness, has never been aimed. As for the adult education course content the opinion was divided. Some did believe that functional literacy was not merely necessary but will also be a better entry point in the case of girls/women, and will help in retaining the students. Others, however, emphasised the need for mass literacy and education in 3 R's done properly. The seminar disapproved the hierarchical and top-heavy nature of the administrative structure in which the adult education instructors were very poorly paid. It was believed that mass literacy campaign should be preceded by mass mobilisation. In this, the local schools and university students should be involved.

There is a need to strengthen the mobile teaching system for seasonal and migrant labour. This should be combined with facilities for Child Care and Health. The IRDP, NREP funds could be used for child care, building worksheds etc. The latter should be used as the venue for adult and non-formal education classes for women and girls. There is a need to monitor the functioning of the voluntary agencies as well as the governmental structures in the field.

The seminar believed that in addition to poverty, the non-enrolment and drop out of girls could be traced to the pre-occupation with innumerable domestic chores, like child care, fetching of drinking water, fuel, fodder etc. The seminar hence felt the need to stress the provision of related support services which will relieve the girls' time and energy for them to pursue education.

Media

The seminar felt that there was a need for decentralisation in the broadcasting content and maintenance of structures and that the computer literacy programme should be progressively integrated with the school curriculum. It also found the need for organising community listening of villagers, with Anganwadi workers as animators. It stressed that all advertisements and feature films that contain elements of consumerism and violence, should be eliminated forthwith. There was also a discussion on open-air programmes. The seminar undertook a scrutiny of some specific aspects of science education, namely science and maths education at the school level for girls, the sex biases in vocational education and women's studies component in the medical education. It sought to analyse them from the point of the values embedded in schools, paragraphs 4.2 and 4.3 of N.P.E.

The workshop adopted specific recommendations. Mention can be particularly made of the formation of a Village Committee. The Committee may consist of a majority of women and among them majority be drawn from the grassroot organisations. DW CRA and the Mahila Mandals under the anti-poverty programmes may be included. Teachers ought to be a part of the committee, along with the Sarpanch and other functionaries of the Government directly concerned with the development of women and children of the area. The Committee should be headed by one of the women members of the panchayat. To gain maximum mobilisation of masses, the committee should be empowered in the following manner:

- (a) by making it a statutory sub-committee of the panchayats;
- (b) by making it responsible for planning, implementation, supervision and monitoring of all programmes for education, health and support services, together with incentives of students/ teachers, in order to achieve the basic objective of women's empowerment through organisation, and access to educational and all other developmental participation; and
- (c) by placing the resources earmarked for this purpose at the disposal of the committee.

The findings and recommendations were well publicised and disseminated through press reporting. The Indian Express, Hindu, Patriot, Statesman, Jansatta (Gujarati) among others carried these to the public. The Doordarshan, in its morning programme on 28 July, 1987 gave the Association 20 minutes to publicise the seminar's findings. A brief compilation of the main findings and recommendations was also carried by the LAWS Newsletter. A larger version is awaiting printing.

National Seminar on Science and Technology Education

One of the important findings of this Seminar was pertaining to Science and Technology education for women. It pointed out the fallacy of an existing view that girls are weaker than boys in science and maths education and discounted it as the factor for the low enrolment in and higher drop-out from science courses. At the same time there is a low participation of girls in science and technology education, even though there has been a relative growth. The growth rate is equally very marginal in science education at higher levels 7.1 in (1950-51) to 29.7 in (1984-85) for women. This can be attributed to many factors the most important of which is that a great majority of women cannot avail of educational opportunities even at elementary and high school level. The inadequacy and poor quality of science education at the primary and secondary levels further limit the number of women taking up science education at secondary school. The lack of adequate institutional facilities, poorly equipped laboratories and absence of science tools, teachers with outdated information and approaches etc. have adversely affected the participation and performance of boys and girls, but much more so in the case of the latter. This is because of the gender biases prevailing in the society and the socialisation processes, which have narrowed career opportunities and job openings. There is further the lack of adequate support services like hostel, women teachers, day care centres. Poverty and lack of financial resources in the family also control the girls' access to education in general, and to technology in particular. There are also powerful and deeply rooted cultural forces that obstruct the full participation of women in politics, in the economy, in the professions as well as the science and technology. These forces must be highlighted and combatted. There are then certain long-held myths based on gender stereotyping. Because of this, certain occupations and professions are perceived to be exclusively or largely for men; while some others are traditionally assigned to women. This myth survives despite the women having demonstrated their capacity to perform well in all areas of endeavour.

The New Delhi workshop hence recommended (i) the need for gathering data on gender specific performance in different subjects at different levels of school education and (ii) to hold another workshop on critical issues relating to women's access to science and technology and the role of institutions specialising in the fields, in the empowerment of women. The result was a national seminar on "Women, Science and Technology" held at Bangalore from 2 to 6 November 1988, in collaboration with the Indian Institute of Science, Institution of Engineers (Karnataka Chapter), N.C.E.R.T and Department of Science and Technology, Government of India. The seminar in which eminent scientists, engineers, women's studies specialists, science teachers and voluntary organisations involved in science education participated, had been preceded by considerable research and data collection in six states, namely Andhra Pradesh, Delhi, Gujarat, Karnataka, Rajasthan and Uttar Pradesh.

This was supplemented by the institutional profiles of approximately 15 schools selected on specific criteria in these six states. The data collected, thus, pertained to the following critical issues.

- (a) Institutional options available to girls in science, mathematics and vocational oriented education;

- (b) Performance of girls in such studies at the class X and XII levels.
- (c) Survey of syllabi-content and values in science and vocational education;
- (d) A special enquiry into options, performance and gender bias in values in selected science-based professional education;
- (e) Case studies of alternative approaches/models developed by individual/institutions/voluntary organisations.
- (f) Impact/requirements of government policies and programmes.

The seminar clearly revealed that the performance of girls in science, maths and technology was equal to that of boys, if not higher. The low participation of girls, hence, had to be traced to the economic, cultural, institutional and other factors.

At the end of this very successful seminar a number of recommendations towards provision of institutional facilities, teachers' training, methodology of science teaching, elimination of gender bias in course options, allocation of greater financial resources, support services, counselling to parents, teachers and students etc. were made particularly recommended, were the dissemination of information on the low cost experiment of Community Science Centres and the undertaking of a micro-level planned study of educational and training needs in science and technical education of different sections of learners.

The Association hopes to bring out a fuller report on the above Seminar, along with the papers and the data collected. We hope to publish this soon. The Association also proposes to continue this effort for further studies to widen the scope and to include more queries. Before we move on to other things, I would like to place on record our sincere appreciation and gratitude to the tireless efforts of Prof Rajeshwari Chatterjee, the first woman Electronic Communication Engineer and a member of our Association, who organised this seminar on behalf of the Association. Her deep involvement and boundless enthusiasm of the cause of girls' education were a source of tremendous inspiration.

Newsletter

The Association is continuing its efforts to communicate with its members through its Newsletter. In the period since the last Conference, it has published 4 issues. One of them gave a brief summary of the sub-theme papers of Chandigarh Conference as well as the Resolutions passed during that Conference. The Newsletter Committee has been expanded to include nearly 20 regional co-ordinators from all over India. They will be sending information on activities in their regions and acting as a liaison with the members and women's organisations. Many of them have been responding with their despatches. We are thankful to Sr. Karuna Mary Braganza and AIACHE in helping us with the production and distribution of the first four issues of the Newsletter. We are also thankful to Dr. Ila Pathak for producing an issue. We are grateful to Dr. Surinder Jetely and her team at B.H.U. for producing the latest issue of Newsletter and the forthcoming ones. We take this opportunity to request all our members to participate, by sending information of the ongoing activities in their place, in the area of women's studies, curriculum development, research, extension as well as social action.

Other Publications

The Association has also emerged as the author of a number of publications during this period. Two of its publications, *The Invisible Hands* edited by Andrea Singh (Sage Publishers, 1986) and *Structures of Patriarchy* edited by Bina Agarwal (Kali, 1988) are the outcome of the Regional Conference on "The Women and the Household". The latter volume is also being published by Zed Publishers as a paper back. Other volumes of the seminar are in the pipeline. The Association also plans to bring out the papers of the First, Second and Third National Conference in the coming years.

The Association notes with great satisfaction the growing volume of literature on women's studies, the amount of scholarship in the form of dissertations, the emergence of a number of women's studies publishers, sale outlets, posters, publications etc.

Election

The Association is a democratically elected body, the Executive Committee being elected every two years by postal ballot. We have already had two elections and the third one is due soon. All those who had become members by 16 August 1988 are eligible to vote, and all members except the Associates, have one vote to cast. Our election process has already started and the papers will be there when we all reach back home if they have not arrived already. The election schedule is enclosed with this report. We have this time 365 voters (144 Life, 162 Ordinary, 20 Corporate/Institutional and 36 students). With one representative per 30 member, we will have to choose 5 persons of Life Constituency, 5 for Ordinary Constituency, 1 for Student and 1 for Corporate/Institutional Constituencies. (Total-12). The new E.C. will co-opt two more members, one of whom will be the Organising Secretary of the next national conference. It is our earnest plea that the members take keen interest in the elections, study the rules carefully and cast their votes. I am making this plea deliberately, as the voting percentage in the past has been very low.

Finances

During the past two years the main income of the Association has been through the membership. We had received a grant for the preparatory studies and the National Seminar on "Women, Science and Technology", from the Department of Science and Technology, Government of India. We also have a commitment from NCERT for another Rs. 5000/- for the same seminar. In addition we had a certain portion of Ford Foundation grant left, which had been utilised for the Task Force meeting and earlier two days Seminars at Delhi. For the Fourth National Conference the Association has received grants from the following agencies.

- (1) Department of Women and Child Development, Government of India.
- (2) Department of Rural Development, Government of India.
- (3) UNICEF

(4) FAO

(5) SIDA

We are happy that we have been able to allocate some amount for undertaking follow up publications.

The accounts for the year 1985-86, 1986-87 and 1987-88 have been audited and attached herewith.

Fourth National Conference

Finally, the present conference is a milestone in the Association's objectives of generating information and disseminating them to the agencies and scholars who need them. Research and generation of information itself is an action. But the Association aims that this information may lead to further action in the form of developmental programmes, policies, curricular changes and teaching. We are happy this Conference has particularly focussed on the problems and issues of the majority of Indian women, who constitute majority of the rural poor. We do hope this leads to making them, their problems, their contribution to development, the impact of present day development on their needs. We have received unprecedented response from various parts of the country by way of participation, papers and queries. We are sorry we could not accommodate all the papers for presentation. The need for participatory discussion, has made us curtail the number of papers for presentation. While many have to be circulated, many had to be also returned as they arrived late. We do hope the participants benefited by way of discussions and interaction, within and outside the Conference sessions. We do hope to produce a report which will have the major findings of the various subthemes, the Reports, Recommendations and Resolutions of the Conference, as well as the list of participants, very soon.

Let me take this opportunity to thank on behalf of the Association and Executive Committee, our Coordinators who volunteered enthusiastically and worked hard to organise the various subthemes and general panels. We have put them to hard task; but for their co-operation the Conference could have never been organised. The Association and the EC would also thank the paper writers, the panelists, discussants and the chair persons of various sessions.

The Association and the Executive Committee take this opportunity to place on record our appreciation of the various donor agencies who came forward promptly and generously, with their funds to make this Conference possible. But for their generosity, we could not have collected so many participants of all parts together. We also thank the University authorities, Voluntary Organisations and Government Departments who supported their members with leave and assistance, to enable them to be here.

While I am on this topic of the conference, the EC and the Association would definitely like me to thank on all our behalf the Andhra University Community. Our thanks are particularly due to Prof. Ila Rao, the Local Organising Secretary and her team of workers. We have put them to real work for the past six months or more, to make

this Conference a success. We are thankful to Prof. Ramana, the Vice Chancellor and his colleagues for lending us all the campus facilities, human resource and above all the academic backing. We do hope the Association's collaboration with the University Community will grow.

Projections for the Future

The Association has come a long way since it was founded six years back. As a forum for interaction amongst individuals or as an organisation that seeks to bring about a change in social values, or as a lobby group that would check and monitor the governmental policies and programmes, the Association has been playing an active role, and its contribution is being widely acknowledged.

As one of its immediate activities, the Association needs to put together the various papers presented in the four national conferences and get them disseminated as publications. The E.C. hopes to get this process going by appointing a publication coordination committee.

The Association also hopes to continue with the studies initiated on women's participation and performance in science and technology education, by extending it to more regions as well as completing data collection, computing and analysing them. It should, further, help in initiating action on the recommendations for follow up, adopted at both the Delhi and Bangalore seminars.

Well, of course besides the above activities, the Association needs to continue its efforts to take the message of women's studies and women's rights to more and more organisations, educational institutions, mainstream disciplines and researchers. The efforts for an alternate perceptions towards development and societal processes, need to be carried much farther, before one can see its visible impact. One hopes to see the Association growing from strength to strength and activity to activity and work to fulfil its given aims and objectives in the coming years.

Before I finish, I must thank my colleagues in the E.C. and the president Dr. Ila Pathak for their eager participation, commitment to the cause of the Association, cooperation and guidance in conducting the activities of the E.C. I have enjoyed my task as the General Secretary, as it was part of a cause and commitment I am also thankful to all the members of the Association for conferring on me this honour.

SUSHEELA KAUSHIK
General Secretary

Treasurer's Report—April 87-Dec. 88

The accounts for the years 1985-86 and 1986-87 were audited during this period, and are attached as Appendix I and II.

Audit of the accounts for the year 1987-88 has also been completed. The report is attached as Appendix III.

The balance of the organisational grant received from the Ford Foundation at the beginning of the current financial year was Rs. 89,233-01. This amount is expected to be utilised by the end of the current year, i.e. 31-3-89. General Secretary has reported the other grants that the Association has been able to mobilise for the organisation of the IVth National Conference, and the Workshop on Women, Science and Technology.

During the last 1½ years, i.e. April '87 to November '88, the Association received a total of Rs. 26,350/- as membership subscription.

It is expected that by the end of the current financial year, i.e. by 31-3-89, the Association will have approximately around Rs. 1,50,000/- earmarked for Publication and follow up action. It is obvious that expected receipts from members' subscriptions will be inadequate to meet the routine expenditure of the Association during the coming years. The E.C. has therefore decided to apply to the Ministry of Human Resources Development for recurring organisational grant of Rs. 50,000 per annum.

Other sources of income include receipts from sale of publications, (which is only just beginning), and interest of Fixed Deposits in April 1987. The Association had Rs. 42,240 in Fixed Deposits. At present this amount is Rs. 52,240, if possible some additional amount will be placed in Deposit by the end of March 1989.

The Treasurer's Report is placed before the General Body for information.
